dëna®

IS POSSIBLE

dëna is an unstructured toy that contributes to the early stimulation of babies and the development of their imagination and creativity.

Because it is an unstructured toy, children are not limited to only one way in which the toy can be used thus providing endless options for play. The possibilities of use depend on the place, context and individual needs of each child.

Made in collaboration with www.wanatoys.com

EARLY STIMULATION

dēna toys favor early stimulation, hand-eye coordination and the first grip of baby. In addition, they can put them in their mouth with total security, as they are made of platinum silicone, the same material as dummies. You can also offer them during a diaper change or during bathtime, as a calming element.

AS A BRACELET

You will be surprised to discover that they can be used as a bracelet on their hands and feet, and it will strengthen their muscles and improve their motor skills while playing. You can also place the toys on the front bar of the pram so they are able to play without the risk of losing them.

PLAY PEEK-A-BOO

Play with your baby by hiding a toy under a blanket and looking for it. You will develop their curiosity and the concept of “permanence” while playing.

PUT IN AND TAKE OUT

Kids love to use the toys to put in, take out, fill and empty and helps them improve the fine motor skills of their hands. Incorporating other toys will make the game even more fun.

TREASURE HUNT

Bury the toys in a bowl of rice, beans or something similar and ask your child to find them. They will enjoy looking for them while improving their attention and their fine motor skills.

You can also use dëna to play with soft modeling clay, sand or kinetic sand.

FREE PLAY

Free and unstructured play is very important for good cognitive development. Since dēna toys, are made of a soft material, it allows for children to play freely. They can bite them, crush them or throw them without any danger.

TURN IT INSIDE OUT

Surprise them by turning the figures inside out and converting for example, the house into a beautiful cloud. They will love it and very soon they will begin to try it by themselves, exercising their fine motor skills, improving their tolerance for frustration when turning it inside out and feeling successful when it is achieved. If they are over 4 years old, let them discover it themselves. It will boost their curiosity and their self-esteem.

PLAY BY STAMPING

Offer dēna toys as a stamp. With a little child-friendly paint and paper, they can develop their coordination, imagination and creativity. And they will discover the wonderful artist inside!

THREE-DIMENSIONAL PUZZLE

As three-dimensional puzzles, it will help them to exercise concentration, perseverance, logic, visuo-spatial and visuoconstructive abilities. And all this while playing and having fun!

PLAY BY SORTING

Sorting them by shape or colour will be fun and help them develop language, learn the names of colours and the first concepts of quantity and numbers. All of this done by playing!

SYMBOLIC GAME

At the park, the beach or in the bathtub, symbolic games are one of the best ways to develop language. Representing everyday scenes will help them identify and name objects, colours or situations.

USE AS MOULDS

The house and the tree will also serve as moulds to play with the sand, while the dēna kids will be the fun inhabitants of their buildings. Develop fine motor skills, imagination, creativity, symbolic play and language all whilst playing.

PLAY BY STACKING

dēna offers endless solutions as a stacking toy. Initially, they will begin with simpler structures and then move on to higher and more complex ones. It is also possible to take turns, trying not to drop the pieces. They will be exercising logic, concentration, perseverance and visuospatial and visuoconstructive abilities.

AS A TEMPLATE TO DRAW

You can suggest they use their dēna toys to color the interior or to use as templates to outline the shapes. They will enjoy practicing graphomotor skills, fine motor skills and visuospatial skills.

TELLING STORIES

As stories become more complex, it will help with the development of language and improve their narrative ability. And it will also help in the ability to recognize and name different basic emotions such as joy, sadness, fear or anger.

MAKING MORE ELABORATE PLATES

Working together at home is important and there is no better way to learn that than by playing. Ask them to help you prepare beautiful plated dishes using dēna houses or trees as moulds. They can be cleaned easily in the dishwasher. Vegetable burgers or rice that have playful shapes are more fun to eat and they will feel proud having helped prepare it.

AS DOMINOS

Stacking is very fun, but knocking it down afterwards can be even more fun. What if we knock them down like dominos? Learn by playing to plan and execute, favouring the logical thinking of cause and effect.

PLAY TO CREATE

With dēna everything is possible and its figures will be the key to infinite artistic proposals. What if we wrap them in colorful wool or yarn? Every child is an artist!

dëna.

BAKE

Cookies, muffins, gelatin, ice cream... With dëna you can share wonderful moments baking and cooking. They are certified for contact with food and are suitable for the oven, the freezer and of course for the dishwasher. Their toys will be like new every time and will last for many years to come!

FAMILY PLAYTIME

Playing with dad and mum, with a sister or with a friend, is the best. Enjoying one another during a leisurely game time is a fun activity that will best develop all their motor, cognitive, emotional, social and sensory abilities. And all this, in exchange for just a little of your time!
