dëna[®]

dëna is a very young brand, only 5 years old, which can already be found in toy stores from more than 50 countries.

dëna creates 100% food grade silicone toys that are **safe, simple** and **smart**. The beautifully colored dëna toys will be your newborn's teether, toddler's stacking toy and preschooler's baking mold.

Thanks to the material used and the unstructured nature of the toy, dëna is one of the most **versatile** toys on the market.

Useful at home, in the classroom, in therapy sessions for children, in the bath or even at the beach, dëna will provide endless options for use and play.

Versatile and safe, dëna toys helps develop hand-eye coordination, provides a sensory experience, aids in cognitive development and allows children to use their imagination and problem-solving skills to create wonder after wonder. It also doubles as decor!

dëna was born from the passion of a father, Robert Garcia, a designer by profession from San Sebastian, Spain, whose objective was to develop a safe and simple toy for their children, yet versatile and magical.

Robert, inspired by the artist Keith Haring, desired to create a toy that favored the development of a child's imagination and creativity and that also allowed for children to express themselves through play.

dëna toys are **safe**. They are a new alternative to wood, allowing for babies and children to play safely. We use 100% platinum silicone from Germany, the same material as baking molds which resists temperatures from -60°C to + 220°C. It can be cleaned in the dishwasher and used in the freezer or oven.

Silicone is a **sustainable** material since it is not a plastic, nor a petroleum derivative. It does not emit any emissions nor toxic substances making it safe for the environment and our oceans.

Our toys are also **BPA, PVC, latex and phthalate free**. We meet all of the highest certifications for the Europe and USA.

dëna toys are **simple**. Our minimalist design favors the development of a child's imagination and creativity, allowing the toy what it needs to be in the moment. The simplicity of the design allows for open-ended play and endless possibilities.

Some ideas include: (You can find more in the attached booklet, "Ways to Use") as a teether; for stacking; to discover new shapes when flipped inside out; for storytelling; as a puzzle; for sensory stimulation; even for baking, thanks to its high quality, food-grade silicone.

Our toys are **smart**. dëna, meaning "everything" in the Basque language expresses that the toy can be anything and everything based on the needs and development of the child.

Welcome to dëna, where everything is possible.

Free play

The safety of the material, together with a minimalist design, mean that this toy can be enjoyed in very different ways and always safely and **adapted to its moment of development:**

WHEN THEY ARE BABIES,

children instinctively put everything in their mouths and with this toy they can do it with 100% safety from 0m+.

WITH 1 AND 2 YEARS

you can hit it, throw it or wet it during the bath, in a free game and without rules. This full play is very important for their cognitive, physical and emotional development.

WITH 3, 4 AND 5 YEARS OLD,

they will develop the symbolic game, they will learn to classify by shape and color and they will develop their concentration and perseverance playing stacking the figures.

FROM 5 OR 6 YEARS OLD,

they can help mom or dad to cook delicious cupcakes or delicious fruit ice creams, since dēna toys are oven, freezer and dishwasher safe.

Material and sustainability

Silicone is a highly resistant material and this favors the durability of products made of said material. This helps to reduce the amount of products manufactured and avoids the practice of throwing away.

Platinum silicone is a soft, resistant and BPA, PVC, latex and phthalate free material, absolutely safe for children's use, which resists temperatures from -60°C to + 220°C. That's why it can be cleaned in the dishwasher or used for freezing to make ice cream or baking to make cupcakes.

In addition, silicone is a sustainable material not derived from petroleum. The primary product for the production of silicones is silica, very abundant in sandstone, beach sand and other similar rocks; silica is also, for example, the main ingredient in glass.

The high quality silicone used by dēna is inert. That is, it does not release toxic. If a silicone product ends up in nature, after a few decades it will break down into small particles that are completely harmless to the environment.

It does not release toxic gases during incineration: if it is incinerated in waste treatment plants, silicone only releases silica, carbon dioxide and water vapour, unlike the toxic gases generated by burning plastic.

děna rainbow

The Waldorf rainbow was first made of wood in the 1970s, inspired by the educational ideas of the Austrian Rudolf Steiner (1861-1925). Finally in 2019, děna has designed a perfect model for the little ones. Made of 100% platinum silicone and valid from 0 months.

Thanks to its design and its 100% safe silicone material, they will use it from a very young age (+0 m), adapting it to their evolutionary stage and their needs. First as a teether and then as a resource in symbolic play, it will surely be one of your favorite toys for many years.

Infinite combinations

dëna toys are open-ended, multifunctional and modern sensory toys providing endless options for use and play! Use indoors or outdoors for teething, stacking, baking and free play. With colourful shapes and a soft, flexible material, play is always safe and infinitely creative.

dëna Magic Flip.

dëna magic flip is fun! It's a square that turns into a butterfly, a triangle that turns into a clover, a heart that turns into a leaf, and a star that turns into a flower.

It's amazing and magical!

Each figure changes shape when turned inside out, stimulating the curiosity and motor skills of a baby. In the flip challenge, they will naturally learn to use their little fingers as they play. Also, when you hold down on the butterfly, it turns into a robot, a worm, and many other shapes.

Creativity is stimulated by imagining more and more shapes. And the "feeling of accomplishment" that comes from shapeshifting encourages fun as well as language and communication.

From around 1 year old to adults, you will be able to stack, organize and combine the देंna magic flips, playing with balance, symmetry, color or shape. You can also compose beautiful mandalas, promoting concentration and perseverance..

Thanks to its soft silicone material, if you drop it on the ground, it makes no noise and is very safe, even if you step on it or drop it. Also, देंna can get wet, so you can play with them in the bathtub. If it gets dirty, it can be washed with water, so it is very easy to clean even if you use it for sand play or as stamps with washable paint.

Take it everywhere!

Each set contains 8 pieces, for ages 10 months+.
Available in neon, pastel and nature colours.
